

Project 4: Preference Elicitation

Human-Centric Artificial Intelligence | Group 29

This is a placeholder.

The finished report will cover:

Task 1 - the feature representation chosen for the IMDB 5000 films, and why, given that utility is linear in those features.

Task 2 - the Plackett-Luce extension of the Bradley-Terry model to rankings, its reduction to Bradley-Terry at $n = 2$, the rejected rank-breaking alternative, and the estimator for w .

Task 3 - the full design of the user study: hypothesis, assignment and counterbalancing, measures, recruitment, ethics and data protection, and the analysis plan.

The interface for Task 4 is already implemented and can be reached from the project landing page.
